

AUSSIE MADE ELEX HEATERS OFFER A WALL OF WARMTH

The Elex range of convective wall panel heaters manufactured in Australia by Melbourne based Thermofilm Australia offer an attractive heating solution for offices, bedrooms, living areas, classrooms and many other applications.

The stylish Elex range offers a choice of five models with either dove white powder coated or stainless steel exterior finishes.

Elex heaters can be simply mounted using the standard brackets supplied to a wall area, or for portable use with freestanding feet or castors.

The slimline units employ a unique heating element to create a combination of convective currents and radiant heat which provide gentle, comfortable warmth throughout the heated zone.

The X shaped element is engineered to provide maximum heating surface area and operating efficiency at minimal cost.

No fan is required so there is no airborne dust or pollen, making the Elex convective panel heaters an ideal solution for asthma, allergy or hay fever sufferers.

Nor is there any noise as there are no moving parts, and a thermal cutout ensures safe and trouble free operation.

As evidence of this, the manufacturers offer a 5 year product guarantee and 10 year element guarantee as standard.

The Elex also incorporates a seven day multi programmable digital timer with up to fourteen preset day and night combinations with eight on and off combinations each day.

This feature reduces operating cost by ensuing operation only when heating is desired.

A simple power point plug and cable connection also means no installation costs.

Complying with all Australian and New Zealand electrical standards the Elex range is available in five models from 750 to 2400 watts in capacity to suit spaces from 8 square metres up to 30 square metres for the largest model.

For more information on the Elex range which can be obtained through major heating product distributors contact Thermofilm Australia on (03) 9562 3455 or view the product details at www.thermofilm.com.au
