

HEATSEAT

UNDER SEAT RADIANT HEATERS

HEATSEAT CHURCH HEATERS

A CHURCH HEATING SOLUTION

With high ceilings, cold floors and drafts from open doors, heating churches has been an age old challenge.

To do the job adequately, most types of heating systems would be too high in purchase cost and very expensive to operate.

HEATSEAT Church Heaters are slim flat panels, which fit out of sight under church pews and gently radiate heat to your feet and legs. By warming your cold feet and legs you feel comfortable, even at lower temperatures.

The HEATSEAT Church Heaters warms the floor around the pews, and rising currents of convective air contribute further to creating a comfortable warm environment.

This simple heating solution is low in initial cost, low in running cost and is safe and reliable in operation. HEATSEAT Church Heaters make it easily achievable for church congregations to be warm and comfortable while they worship.

SAFETY AND HEALTHY OPERATION

The unique element used in HEATSEAT Church Heaters enables the heat to be spread evenly over the entire heater surface. This enables a much lower operating temperature than conventional heaters, ensuring the heaters are always safe and reliable.

The natural convective heat from HEATSEAT Church Heaters do not circulate air like traditional fan forced heaters, therefore reducing the risk of circulating dust particles that could cause allergies or health hazards for people with respiratory problems.

AFFORDABLE INITIAL COST

As HEATSEAT Church Heaters are custom designed to fit each pew, it is possible to use them on a few pews initially, and then add more heaters later as your budget permits.

HEATSEAT Church Heaters use advanced element technology that makes them simple in design and therefore lower in cost.

HEATSEAT Under Pew Heaters

AFFORDABLE OPERATING COSTS

HEATSEAT Church Heaters directly heat the area where you feel the coldest; your feet and legs, so you can stay comfortable and warm with minimal energy usage.

Instead of wasting energy on heating wide open spaces, heat is concentrated where it is needed and you can therefore realise enormous energy cost savings. Typically you would invest less than 2 cents per hour, per person to operate HEATSEAT Church Heaters.

PEACE OF MIND

HEATSEAT Church Heaters are manufactured with a tough metal casing that completely protects the heater from harm. There are no moving parts so there is absolutely no maintenance required.

As an extra safety feature, an inbuilt safety cut out thermostat protects each heater. You can therefore enjoy years of maintenance free performance, and rest assured with the full 5 year heater guarantee.

SILENT OPERATION

HEATSEAT Church Heaters are totally silent in operation so there are no annoying noise distractions as produced by some types of heaters.
